```
// 02-conditional.js

//###Conditional Operators
//To check some conditions and based on the condition if we want to
perform some operation
//if statement : executes a block of code only if a specified condition
is true

//if_else: execute one block of code if the condition is true otherwise
//it will execute other block of code

//else if: used to check multiple condition

//create a function using function keyword, function is a reusable block
of code

function student(marks) { //parameterized function
    if(marks>=80) {
        console.log('distinction')
    } else if (marks>60) {
        console.log('first class')
    } else {
        console.log('second class')
    }
}

//call the function using function name
student(90) //here pass the value for the marks parameter

// syntax - get the syntax, type if and press ctrl+space and choose the
right one and
// press enter

/* if(condition) {

} else {

}*/

//to run in debug mode, click on the line, click run and debug, selec
node.js as debugger
// then right click marks -> add watch, then the value will be passed to
next line

// switch - use switch when one variable can have many different values
/* switch (key) {
    case value:

        break;

    default:
        break;
} */

let alertType = 'confirm' // with break, only the confirm part will get
executed
```

```
switch (alertType) {
    case "simple":
        console.log('simple alert');
        break; // if yu miss break all the case will be executed
    case "confirm":
        console.log('confirm alert');
        break;
    case "prompt":
        console.log('prompt alert');
        break;
    default:
        console.log('invalid alert');

}

/* output:
distinction
confirm alert */
```
