Classroom Assignment: Squares in Reverse Order

Learning Objective:

Learn to use the **for** loop to iterate in reverse order and perform arithmetic operations in JavaScript.

Expected Completion Time:

Best Case: 10 minutes
Average Case: 15 minutes

Assignment Details:

Create a JavaScript program that prints the square of each number from **10 to 1** using a **for** loop.

Assignment Requirements:

1. Declare and initialize a variable to start from **10**.
2. Use a **for** loop to iterate from **10** down to **1**.
3. Calculate the square of each number inside the loop.
4. Print the square of each number in reverse order.
5. Do not use arrays or built-in functions to calculate the squares.

Hints to Solve:

- Initialize the loop variable to 10.
- Decrement the loop variable by 1 in each iteration.
- Multiply the number by itself (**number * number**) to find its square.
- Print the result using **console.log()**.

Expected Outcome:

- Understand how to use a **for** loop in reverse order.
- Perform arithmetic operations inside a loop.
- Print values generated during each iteration.
